**To:**

Hiring Manager

ALCION Packaging Solutions

Valencia, Spain

**Re: Application for Process Engineer Position**

Dear Hiring Manager,

I am writing to apply for the **Process Engineer** position at **ALCION Packaging Solutions**. With over 75 years of history, ALCION's reputation for quality in industrial packaging is impressive. I am eager to bring my 8 years of experience in plastics processing and optimization to your facility in Valencia.

**Technical Expertise**

My background at **MAAG Group** involved commissioning and optimizing complex extrusion systems globally. I have a deep understanding of polymer behavior and processing parameters, which is critical for producing high-quality barrier packaging and containers. I am experienced in troubleshooting process deviations to ensure consistent wall thickness and mechanical strength, key factors in your industry.

**Efficiency & Innovation**

At **Autoneum**, I have honed my skills in **Lean Six Sigma** and process automation. I successfully implemented cost-saving measures that reduced material waste by up to 12%. I am also proficient in using Python for data analysis, allowing me to identify trends and optimize production cycles efficiently. I am keen to apply these skills to enhance the productivity of your blow molding operations.

**Commitment to Valencia**

I am in the process of relocating to **Valencia** and am committed to building my long-term

career in the region. My international experience and fluency in English (along with my native German and developing Spanish) make me well-suited to support ALCION's export-oriented business.

I look forward to the opportunity to discuss how my hands-on engineering approach can contribute to ALCION's continued success.

Sincerely,

**Jonas Glawion**
